MENTIS' SILK™ AND SILK DESIGNER™ ARE BEING EXPANDED TO INCLUDE OUTPUT IN .NET

GREENWOOD VILLAGE, Colo. (July 5, 2008) Mentis International Corporation announces it plans to release its groundbreaking Silk™ Animation Framework and Silk Designer™ Authoring Tool on the Microsoft.NET platform in Q3 of 2008.

Fulfilling its promise to make Silk and Silk Designer the standard for set-top, mobile, and home theater user interfaces world-wide, Mentis International Corporation announces it is expanding its Java SE and ME output formats to include Microsoft .NET. This additional deployment platform option will expand the Silk product line output to more devices, including Media Centers and Home Theater Personal Computers (MC/HTPC). Currently, Mentis' Silk line provides plug-in ability for Java ME and SE based set top and hand-held devices.

“What distinguishes Mentis' Silk products from our competitors is its small footprint and high-performance,” says Rich Schoenmaker, CEO of Mentis International Corporation. Mentis' Silk Animation Framework provides lightning-fast response while maintaining a tiny footprint of less than 50kb. Mentis' Silk Designer is a desktop graphic user interface (GUI) allowing non-developers to author Silk screens and animate widgets.

About Mentis

Mentis International Corporation is a middleware solutions provider for the cable and telecommunications industry, providing legacy system integration and open system infrastructure to support broadband, video, data, and voice services. A leading integrator for order entry, billing, workforce, customer care, provisioning, workflow, and inventory systems, Mentis provides solutions to automate key internal sales and service delivery processes, enabling our clients to manage complex third-party business relationships and reach out directly to the customer.
